

# A document from Quarto

with document metadata included

2024-11-10

A dummy document example to see if the pdf metadata is saved correctly

Quarto (pandoc probs) automatically applies document properties to the generated pdf document. This document shows that, though “subtitle” appears not to be supported.

**TODO:** - ensure that these properties still come through when generating document using the `document-issue` extension. - chat to IT about adding some of these properties to the default file explorer view.
